

SMART INDIA HACKATHON 2026

# Capacity Connect

A digital capacity-building portal that turns learning activity into visible competency — and visible competency into the next best action.

PS 26075 / TEAM QUIRKY KODERS

## THE PROBLEM

# Five fractures. One blind spot.

### 01 Training data lives in silos

LMS records, attendance and field performance rarely meet.

### 02 Completion ≠ capability

Certificates show participation, not demonstrated application.

### 03 Needs are found late

Periodic reviews miss emerging skill gaps and local context.

### 04 Trainer selection is opaque

Generic ratings hide course-specific evidence and recency.

### 05 Learners lose the thread

Disconnected portals weaken continuity, motivation and guidance.

**Shared consequence**

**No trusted, continuous view of capability.**

# One learning graph. Many evidence signals.

The portal connects identity, learning, practice and organizational need — while retaining the source and recency of every signal.

## HOW IT WORKS

# Evidence → insight → action → new evidence

A transparent loop — not a black-box score.

Each recommendation links back to visible evidence. Learners and admins can challenge, correct or add context.

# One identity. Three useful views.

TRAINEE

T

My goals, evidence, competency map, next steps

Control what is shared

TRAINER

F

Course fit, delivery evidence, learner support signals

Evidence by course context

ORG / ADMIN

O

Role demand, capability coverage, interventions, governance

Aggregate before individual

# See learning as a room you can build.

Courses become shelves. Topics become books. Book thickness reflects demonstrated competency — not time spent.

# Many subject areas. One navigable city.

Explore across domains without losing the path back to your role and goals.

# Suitability is course-specific — and inspectable.

Rank evidence, not people. Show why a trainer fits this course, now.

| Candidate | Relevant delivery | Learner outcomes | Recency | Context fit |
|-----------|-------------------|------------------|---------|-------------|
| A. Rao    | Strong            | Strong           | Recent  | District    |
| M. Das    | Strong            | Moderate         | Recent  | State       |
| S. Khan   | Moderate          | Strong           | Older   | District    |

Visible factors: course relevance • observed outcomes • evidence recency • delivery context • availability

# From a snapshot to a learning signal.

## PERIODIC JUDGMENT

One exam  
Late intervention  
Binary pass / fail  
Little context

SHIFT

## CONTINUOUS EVIDENCE

Micro-checks + practice  
Reflection + feedback  
Progress over time  
Early support

Engagement is meaningful when it produces evidence: attempt, application, explanation, feedback and revision.

# Evidence becomes direction — not destiny.

Competency insight stays explainable, revisable and tied to a learner's role and goal.

**“Why this recommendation?” remains a first-class feature.**

# Built for real capacity-building moments.

01

## District rollout

A new welfare process launches. Admins spot role gaps, assign a learning path and track field evidence.

02

## Trainer allocation

A state academy selects facilitators for a data-governance course using recent, course-specific evidence.

03

## Career mobility

A trainee sees which demonstrated competencies transfer to a target role — and what to practise next.

# Better decisions at every level.

**TRAINEES**

Clear progress beyond certificates; role-relevant next steps; portable, explainable evidence; agency over profile visibility.

**TRAINERS**

Course-specific fit; actionable learner signals; feedback tied to delivery; a fairer record of contribution.

**ORGANIZATIONS**

Earlier gap detection; targeted interventions; capability visibility by role and unit; auditable decisions.

**ECOSYSTEM**

Shared vocabulary for competency; less duplicated data; stronger continuity across programs and providers.

Grounded in the principles of NEP 2020, Mission Karmayogi’s FRAC approach, and evidence-led workforce development.

# Ambitious outcome. Bounded system.

## FEASIBLE NOW

1. Modular web portal + standards-based APIs
2. Rule-led evidence model before advanced AI
3. Start with selected roles, courses and signals

## SAFEGUARDS

1. Consent and role-based visibility
2. Source, recency and confidence always shown
3. Human review for high-stakes decisions

## KNOWN CHALLENGES

1. Uneven data quality and connectivity
2. Bias from missing or over-represented evidence
3. Change management and shared competency language

**AI assists classification, retrieval and recommendations. It does not autonomously certify competence or make irreversible personnel decisions.**

---

CAPACITY CONNECT

# Build the room. Navigate the city. Grow with evidence.

A connected capacity-building ecosystem for every learner, trainer and organization.

PS 26075 • OCTOPER
